*"Where Quality & Service does matter"*

The company that brought "**Service**" & "**Quality**" in Laser Cutting at competitive prices now have even more to offer, "**Fabrication**".

- **2D Laser Cutting**
- **3D Laser Cutting (6 Axis)**
- **Rotary Laser Cutting**
- **Laser Marking & Rotary Laser Marking**
- **Folding & Bending**
- **Fabrication**
- **Mig & Tig Welding**
- **Complete Project Management**
- **Delivery Service**

## **BENDING & FOLDING**

Our Trumpf press brake is capable of bending and folding complex parts to precise specification, time after time. With its 3 metre, 130 ton capacity, anything from small, intricate sheetmetal components to large plate 6mm thick and beyond. The addition of an i axis allows for safety folds and hemming to be performed, all in the one setup

The six axis backgauge allows us to accurately produce bends that are not consistent with the outside profile. Offline software allows us to simulate bending, determining the possibility of producing your parts without collision.

## **BENDING SPECIFICATIONS**

- 3000mm bending length
- 130 ton capacity
- 6 axis backgauge
- CNC crowning
- I axis – 3000mm hemming and safety folds
