

Use metallic ink for stylish, luxurious and eye-catching prints

Imagine what metallic and white ink can do for your business... Just combine these colours with CMYK to create over 500 metallic tints. These tints give your standard print and cut jobs a luxurious and eye-catching look. Bet your clients will love it!

The VersaCAMM VS breaks boundaries. For the first time in history, metallic and white digital printing is possible with one fluent and easy workflow.

It's a matter of making your choice

Choose the printer/cutter that fits your company best! The VersaCAMM VS family is available in four widths and four ink configurations. You decide which combination you prefer.

Media widths:

• Ink configurations:

CMYK, light cyan, light magenta, white and metallic for the widest range of applications

CMYK, light cyan, light magenta and double white for dense white and high-speed white printing

CMYK, light cyan, light magenta for flawless skin tones and beautiful pastel colours

double CMYK for high speed production

Superb metallic printing

The VersaCAMM VS printers/cutters create beautiful metallic graphics. Select the new 'layered printing mode' in the software for the most powerful metallic colours ever. In this mode, the metallic ink is printed on the bottom and the colours are printed on top. This results in truly magnificent metallic shades.

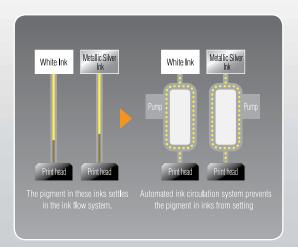

Innovative, easy and beautiful

The VersaCAMM VS features a newly developed golden print head. This head was especially developed for an even better print quality. You now have one print head for all the colours. Seven different drop sizes guarantee the best print quality for every job.

The VS is also very easy to maintain thanks to the automated ink circulation system for white and metallic inks. This system prevents pigments from settling.

When you choose for the VS, you choose for a solid machine that is beautifully designed. You can easily place it in your office or showroom since the Eco-Sol MAX inks don't require an exhaust system.

Efficiency rules

The VersaCAMM VS machines are highly efficient since they combine printing and cutting in one device. Imagine the ease of starting a task in the evening and finding it completely printed and cut in the morning. But there's more! With this unique 2-in-1 solution, you no longer need to reposition your prints in a separate cutting plotter. This saves you a lot of time and guards you from mistakes.

Unlimited range of applications

Easy creation of metallic patterns

All Roland printers come with VersaWorks. This software offers you the possibility to print metallic patterns. There are 25 patterns available. Just select the one you like and the software does the rest. Creating special effects is piece of cake!

VersaWorks features a library of 512 metallic colours. Just select the colours you like and wait a minute to see the truly magnificent result rolling out your printer.

The possibilities of white ink

White ink creates superb effects on transparent, silver and coloured materials. This gives an added value to window decoration and packaging prototypes. You can choose between a configuration with white and metallic or with double white. This last configuration increases the print speed of white up to two times. Roland DG recommends to install an extra dryer/blower to speed up the drying process and to improve your productivity.

Trust the online "production assistant"

VersaWorks features "Roland OnSupport". This online support system allows you to remotely monitor your machine's activities. The system sends e-mail notifications with important production information. The system informs you for instance when your print job is ready or when the ink is almost empty. With Roland OnSupport, you have complete freedom to leave your printer unattended and focus on other jobs.
